

bls_rm	Remove bls files from data disks
<u>DESCRIPTION</u>	bls_rm is a command issued in the UNIX window that removes the named bls file from the index directory.
<u>SYNTAX</u>	bls_rm [-h <host>] [-a] [-f] <pattern> where options are: -h {host} Host where BLS files reside -a Show all files -f Force, do not prompt even if multiple files pattern Files following the format <pattern>
<u>EXAMPLES</u>	bls_rm v2Ac1N1s053d14p0359n002tS.02-172-175406
<u>NOTES</u>	The bls_rm command can be executed at any time from the UNIX command window on an open file.
<u>LIMITATIONS</u>	When using wildcards, (i.e.,: bls_rm *), single quotes should be included around the '<pattern>*' or else the unix system will try to expand the expression rather than the file.
<u>RESPONSES</u>	None
<u>REJECTIONS</u>	bls_rm: no files specified for removal No file was given for removal
